SUMMARY

Data Analyst skilled in SQL, Python, Power BI, and data visualization, with experience analyzing 25,000+ records and building 10+ KPIs for performance monitoring. Strong in dashboard development, statistical analysis, data interpretation, and generating actionable insights to support data-driven decision-making.

EXPERIENCE

Data Analytics Trainee

Physics Wallah (Remote)

May 2026 to Present

Tools Used: Excel, SQL, Python, Power BI, Power Query, DAX • Completed hands-on training in data analysis, data cleaning, data visualization, and business reporting. • Used Excel and SQL to clean, manipulate, and analyze datasets for exploratory data analysis. • Developed practical skills in Power BI, including Power Query, data modeling, DAX, KPI development, and interactive dashboards. • Applied Python for data analysis and visualization using Pandas, NumPy, Matplotlib, and Seaborn. • Created data analysis projects to identify trends, patterns, and actionable insights for data-driven decision-making. Customer Churn Analysis | Python • Analyzed 7, 043 telecom customer records using Python to identify churn patterns across tenure, contract type, and monthly charges. • Engineered contract-type buckets and tenure bands to improve customer segmentation and support more targeted churn analysis. • Created 11 visualizations including histograms, box plots, and heatmaps to identify churn-prone customer segments and communicate trends clearly. • Identified that 38% of churned customers were on monthly contracts with less than 3 months of tenure, providing an actionable basis for early customer-engagement strategies. Mobile Sales Dashboard| Power BI, DAX • Developed an interactive Power BI dashboard analyzing mobile sales across brand, model, city, and month to support performance monitoring. • Created DAX measures and KPI calculations to track sales, transactions, quantity, and overall product performance. • Designed dynamic visualizations using slicers, charts, maps, and tables, enabling users to filter and analyze sales trends across multiple dimensions. • Analyzed product performance, sales trends, customer ratings, and payment preferences to surface business insights for decision-making. Sales Dashboard for Regional Performance | SQL, Power BI • Integrated and joined 3 sales-related tables containing 25, 000+ rows across 12 months and 5 regions using SQL to create consistent, analysis-ready datasets. • Developed 10 dynamic Power BI measures and KPIs to monitor regional sales, returns, and product performance. • Built multipage Power BI dashboards with slicers and filters, enabling interactive analysis by region, product category, and time period. • Identified a 14% post-festival sales decline in the South region, generating an actionable insight that was subsequently used in a marketing recovery plan.

EDUCATION

January 2026 to December 2026

degree : B. C. A (Bachelor Of Computer Applications) ,

Acharya Institute Of Graduate Studies

degree : ,

SKILLS

- Programming & Querying: Python, SQL Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning, Data Transformation, Data Preprocessing Data Visualization & Business Intelligence: Power BI, Tableau, Matplotlib, Seaborn, Power BI Dashboards, DAX, KPI Reporting, Performance Monitoring Excel & Reporting: Microsoft Excel, Data Analysis, Data Cleaning, Charts, Reporting Analytics: Trend Analysis, Data Interpretation, Data Segmentation, Business Metrics, Actionable Insights Data Management: SQL Joins, Data Querying, Data Quality Professional Skills: Analytical Thinking, Problem Solving, Communication, Collaboration, Attention to Detail Tools & Platforms: Jupyter Notebook, Git, GitHub
